

X-Effects LED® HO Production Rental Kit

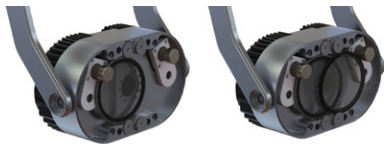

Quick Start Guide

- 1 Prior to operating the X-Effects LED Projector, it is recommended that the unit's Dynamic Effect Gobos (96mm) be inserted into the fixture's Motor Rotation Module. To access the Motor Rotation Module, loosen the four, recessed quick-turn screws on the front of the unit and remove the Lens Tube Module.

- 2 Insert the Dynamic Effect Gobos into the rotation carriers, ensuring that the flat portions of the effects wheel flanges are facing each other. Improper orientation of the effects wheels can cause damage to the unit or may not produce the desired illumination effect.

- 3 Replace the front Lens Tube Module and securely tighten the four quick-turn screws. Insert lens tube and UTL Connector cable.

X-Effects LED® HO Production Rental Kit

Quick Start Guide
